

# How much does Copilot Studio actually cost?

A visual guide to the three ways you'll pay for Copilot Studio agents — and how to pick the right one for your team.

APRIL 2026 • PRICES IN USD

## 1 THE BIG IDEA

You don't pay to *build* agents.  
You pay to *publish* them.

Designing, testing, and iterating on agents in Copilot Studio is free. The cost only kicks in when you push them live to real users on a channel — Teams, M365 Copilot, your website, anywhere.

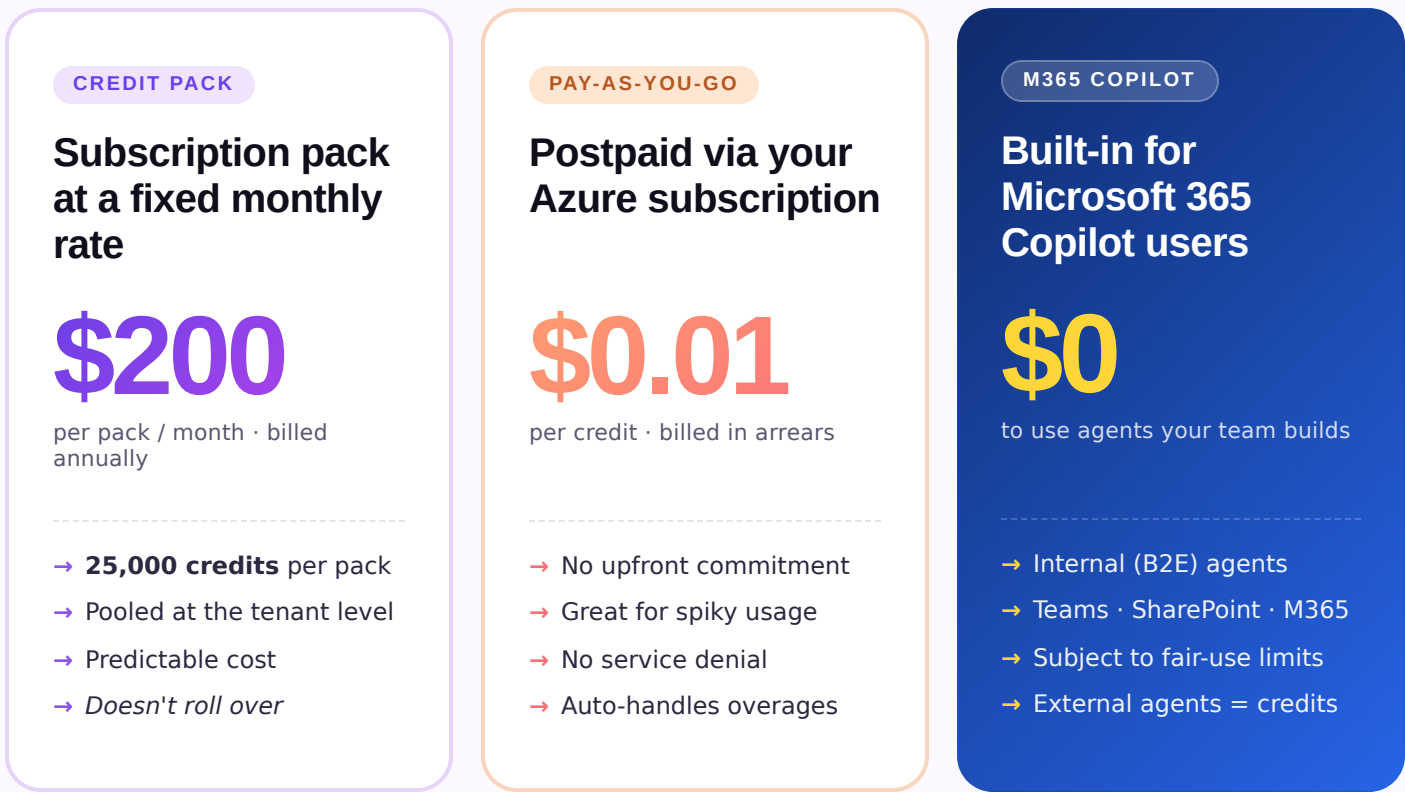

**BONUS** Want to test publishing? Start a Copilot Studio viral trial.

Self-serve signup at [copilotstudio.microsoft.com](https://copilotstudio.microsoft.com) grants a one-time **30-day trial license** (extendable by 30 more days). Heads up: the trial lets you **build & test** only — you still can't publish without a paid path. Built agents keep working for up to 90 days after expiry. Admins can disable self-signup via the **AllowAdHocSubscriptions** tenant flag.

## 2 THE THREE PATHS

Pick how you pay

Every Copilot Studio agent runs on **Copilot Credits**. There are three ways to source them — and one of them might already be free for you.

## 3 CREDIT PACK MATH

One pack = 25,000 credits

Buy as many packs as you need each month. They stack at the tenant level — but they expire monthly, so size to your real usage.

Stack **\$200** packs to scale

Three packs = 75,000 credits/month for \$600/month. Need more? Microsoft offers Pre-Purchase Plans up to **3M credits annually at 20% off**.

\$200

PER PACK

=

25K

CREDITS

=

\$0.008

PER CREDIT

# What does each action cost?

Different agent actions consume different amounts of credits. Here's the relative weight of the most common ones.

A TYPICAL QUERY

12 credits

A **tenant-graph-grounded generative answer** = 10 (graph) + 2 (gen) credits.

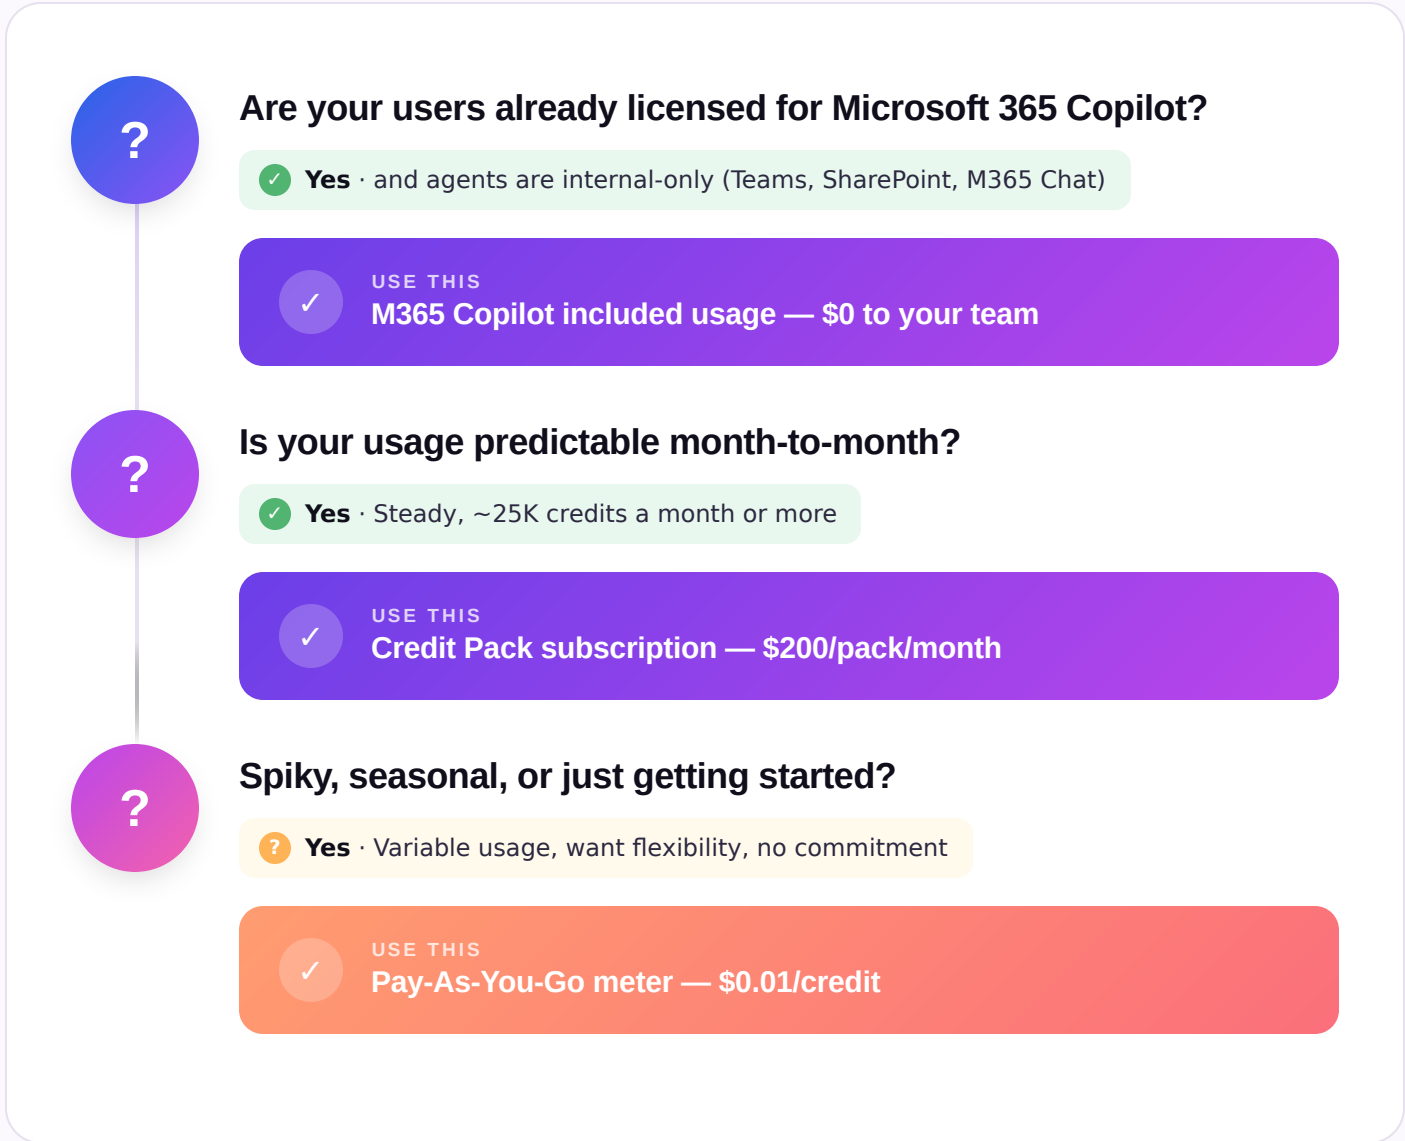

IN DOLLAR TERMS

\$0.12

...on PAYG. Or roughly **1/2,083rd** of a single Credit Pack.

# A 60-second decision tree

Answer two questions and you'll land on the right billing model for your team.

## Forecast your agent's cost before you ship

Plug your agent's expected behavior into the official estimator
